1. Introduction to the Case Study

University campuses usually have many student clubs such as technical clubs, cultural clubs, sports clubs, and entrepreneurship communities. These clubs organize various activities like workshops, competitions, and events that help students develop practical skills and leadership abilities.

However, students often face difficulty in discovering clubs and staying informed about their activities because the information is scattered across different platforms such as notice boards, social media, or messaging groups.

This case study focuses on designing and implementing a web-based platform called CampusConnect. The website acts as a centralized hub where students can explore available clubs, view club information, join clubs, and register for campus events. The platform also provides a student dashboard to track participation and engagement.

The system demonstrates how a simple web application can improve campus communication and student involvement in extracurricular activities.

2. Problem Statement / Case Background (Abstract)

Background

In many universities, there is no centralized platform where students can easily explore and join campus clubs. Students often miss opportunities to participate in events because they are unaware of club activities.

Manual systems such as posters or announcements are not efficient for managing multiple clubs and events.

Abstract

This case study presents the development of CampusConnect, a web-based student club management system. The platform allows students to browse different campus clubs, view detailed information about each club, and join clubs through a simple interface. It also provides event registration functionality and a student dashboard to track club participation and event attendance.

The system is implemented using HTML, CSS, and JavaScript. JavaScript dynamically loads club information and updates dashboard statistics using local storage. The platform demonstrates how front-end technologies can be used to build an interactive and organized campus engagement system.

3. Case Study Design

The CampusConnect system is designed as a simple web-based platform with multiple pages that work together to manage club information and events.

The design includes the following modules:

1. Home Page

The home page introduces the CampusConnect platform and provides an overview of student clubs, campus statistics, and news.

2. Clubs Page

This page displays a list of all available student clubs along with a brief description of each club.

3. Club Details Page

When a student clicks on a specific club, the system opens a detailed page showing:

- Club description
- Faculty mentor

- Club activities
- Achievements
- Option to join the club

4. Events Page

This page lists upcoming campus events where students can

register. **5. Student Dashboard**

The dashboard shows the user's activity such as:

- Number of clubs joined
- Events registered
- Participation statistics

This modular design allows the website to organize information clearly and provide an easy user experience.

4. Methods & Algorithms Technology Applied in the Problem Statement / Case Study

The CampusConnect website was developed using front-end web

technologies. **1. HTML (HyperText Markup Language)**

HTML is used to create the structure of the website pages including navigation bars, sections, club lists, and event information.

2. CSS (Cascading Style Sheets)

CSS is used to design the visual layout of the website. It controls elements such as colors, typography, grids, and responsive layouts.

3. JavaScript

JavaScript is used to add dynamic functionality to the website. It handles features such as:

- Loading club details dynamically
- Joining clubs
- Registering for events

- Updating the dashboard statistics
- Displaying club achievements

4. Local Storage

Local storage is used to store user activity data such as joined clubs and registered events. This allows the dashboard to display updated information without using a backend server.

Technology Stack Used

- HTML5 for webpage structure
- CSS3 for styling and layout
- JavaScript for functionality and interactivity
- Browser Local Storage for data storage

5. Problem Statement / Case Study Implementation Details and Snapshots.

The implementation of the CampusConnect system is divided into several web pages and files.

1. index.html

The home page introduces the platform and provides navigation to other

sections. **2. clubs.html**

This page displays the list of all campus clubs along with short descriptions and a button to view more details.

3. club-details.html

The club details page dynamically loads information about the selected club such as activities, mentor information, and achievements.

4. events.html

The events page shows upcoming campus events and allows students to

register. **5. dashboard.html**

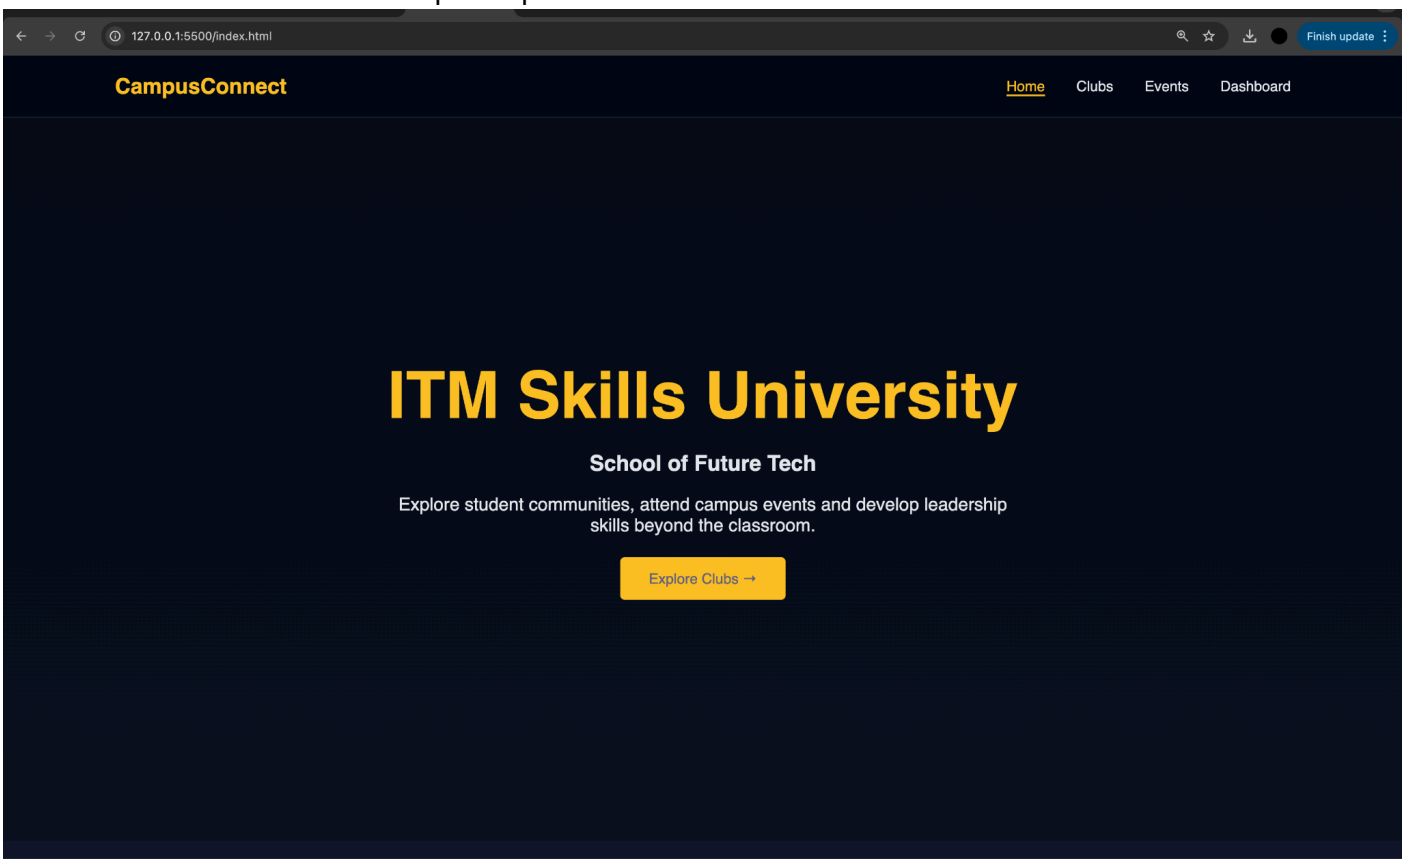
The dashboard displays statistics related to the student's participation in clubs and events.

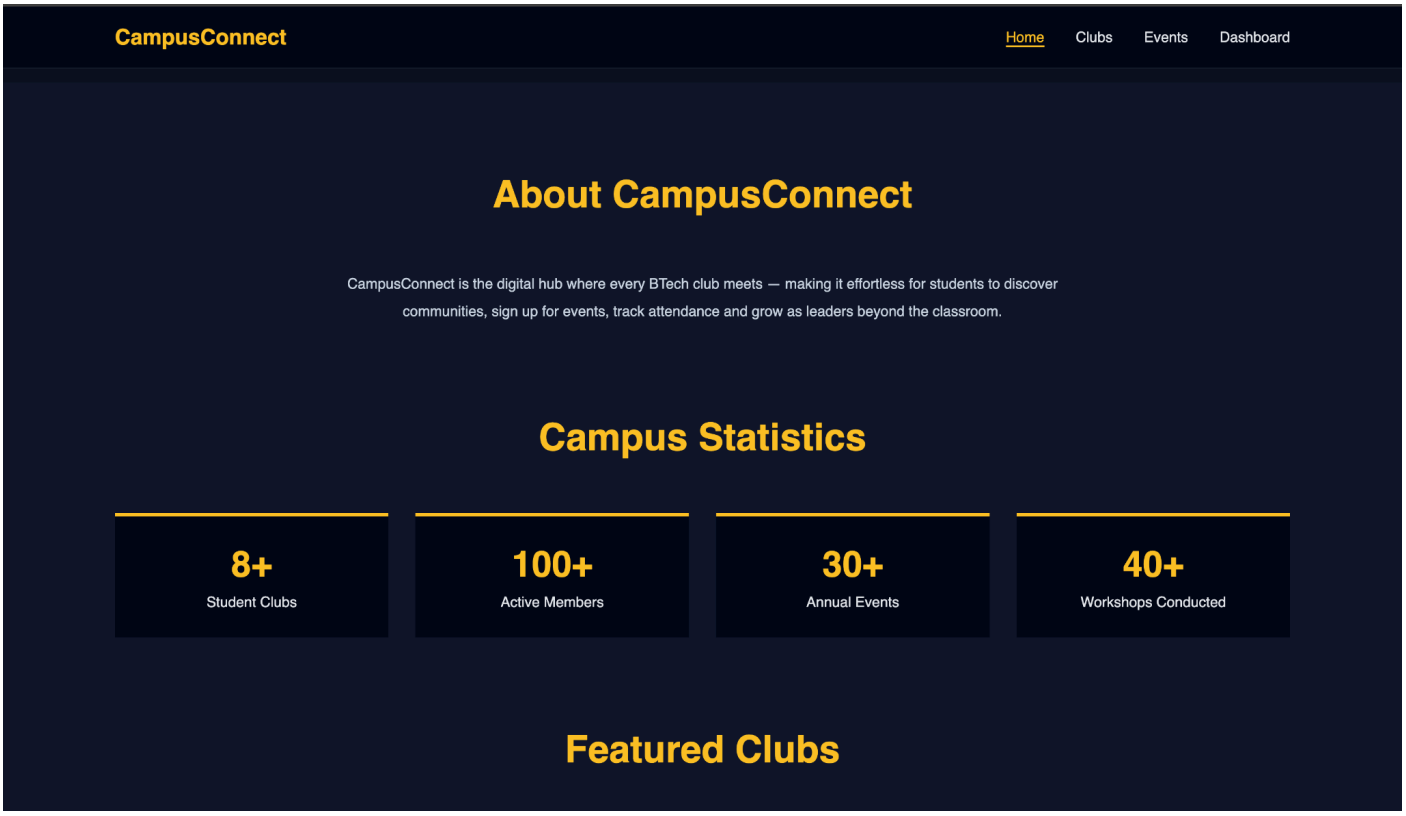
6. script.js

This JavaScript file stores club data and handles dynamic operations such as joining clubs, registering events, and updating the dashboard.

Snapshots that can be included

- Home page of the CampusConnect website
- Clubs listing page
- Club details page with activities and achievements
- Events registration page
- Student dashboard with participation statistics





Featured Clubs

TECHNICAL

Hackathon Club

The Hackathon Club is one of the most active communities on campus. Students participate in national competitions and collaborate on real software projects.

Details

Join

ENTREPRENEURSHIP

Startup Club

Startup Club supports young entrepreneurs and helps students build real startups through mentoring and innovation challenges.

Upcoming Events

📅 25 March 2026

Hackathon 2026

📍 Venue: ITM Auditorium

A 24-hour coding competition for teams of 2–4. Build innovative solutions judged by faculty and industry mentors.

Register

📅 5 April 2026

Startup Pitch Competition

📍 Venue: Innovation Lab

Present your startup idea to a panel of investors and startup mentors. Best ideas get incubation support.

Register

📅 10 April 2026

Sports Championship

📍 Venue: University Ground

Inter-college sports championship covering football, cricket, badminton and athletics events.

Register

📅 18 April 2026

Cultural Festival

📍 Venue: Main Stage

A celebration of performing arts — dance, music, theatre and talent showcases from all clubs.

Register

📅 2 May 2026

AI & Tech Expo

📍 Venue: Tech Block

Showcase AI models, robotics projects and tech innovations built by student clubs.

📅 15 May 2026

Cyber Security CTF

📍 Venue: Computer Lab 3

Capture The Flag competition — test your hacking skills and win prizes.

6. Problem Statement / Case Study Results and Conclusion.

Findings

The CampusConnect website successfully demonstrates how a simple web platform can improve communication between students and campus organizations.

Key observations include:
• Students can easily discover different clubs and their activities. • The platform provides a centralized system for viewing club details and achievements.
• Event registration becomes simpler through the website interface. • The

dashboard helps students track their involvement in campus activities.

Conclusion

The CampusConnect platform provides an organized digital solution for managing student clubs and events. By combining HTML, CSS, and JavaScript, the system creates an interactive environment where students can explore communities, participate in activities, and stay updated with campus events.

Although the current system is built using front-end technologies, it provides a strong foundation for future improvements such as database integration, user authentication, and admin management.

Overall, the project demonstrates how web technologies can enhance campus engagement and simplify club management.
